Summary

Senior Cloud Architect and 13x Certified Engineer with 7 years designing enterprise-grade, multi-cloud ecosystems across GCP, AWS, and Azure for Fortune 500 companies and regulated financial institutions. Specializing in the intersection of Generative AI and agentic AI architecture — including Anthropic Claude-powered systems — FinOps-driven cloud governance, and IaC-powered DevOps; from orchestrating 500+ Cloud Run services at P&G to leading GCP compliance and migration workstreams for RBC's 15M+ global clients. Recognized for architecting cost-optimized, AI-augmented platforms that bridge LLM integration, Big Data engineering, and automated governance to deliver measurable business impact at enterprise scale.

Professional Experience

Systems Architect **Feb 2026 – Present**

EPAM Systems, Inc. — Royal Bank of Canada (RBC)

- Spearheading GCP platform assessment, compliance, and migration workstreams for one of Canada's largest financial institutions, safeguarding cloud operations that serve 15M+ global clients.
- Produced comprehensive GCP findings reports and benchmarked cloud capabilities against Azure and AWS, delivering prioritized recommendations that directly inform RBC's multi-year cloud strategy.
- Architected governance frameworks for Firebase, Google Analytics, and Google Play environments, standardizing onboarding, provisioning, CI/CD workflows, and user access controls across application teams.
- Leading cross-functional migration of Firebase application teams to RBC's Quarantine GCP organization, coordinating Product, Cloud Support, SRE, Cloud Security, and engineering teams to deliver a phased migration plan underpinned by a hardened security baseline.

Cloud Platform Developer **Apr 2025 – Jan 2026**

EPAM Systems, Inc. — W. W. Grainger, Inc.

- Engineered enterprise cloud governance policies via Terraform IaC, establishing multi-cloud compliance guardrails that reduced policy-violation incidents by ~40% across engineering divisions.
- Architected REST APIs and automation services for FinOps reporting pipelines, cutting manual cost-allocation overhead by ~60% and enabling near-real-time cloud spend visibility across business units.
- Drove cloud cost optimization using CloudZero, identifying ~18% in cloud waste through granular attribution, directly improving Grainger's cloud ROI.
- Delivered architectural recommendations balancing scalability, security, and cost-efficiency, contributing to ~22% reduction in monthly cloud expenditure.

Development Team Lead **Jul 2024 – Mar 2025**

EPAM Systems, Inc. — Whirlpool Corporation US

- Elevated a cross-functional engineering team through structured code reviews and mentorship, reducing critical defect rate by ~35% while accelerating sprint velocity.
- Architected a library of reusable Terraform modules adopted across 6+ project teams, cutting infrastructure provisioning time from days to hours and enforcing enterprise-wide consistency.
- Owned end-to-end DevOps lifecycle across Bitbucket, GitLab, and GitHub Actions, maintaining 99.5%+ pipeline reliability for production workloads serving 10M+ users.
- Translated complex GCP architectural decisions into executive-level communications, securing stakeholder alignment on 4 major platform initiatives impacting multi-year roadmap.

Cloud Platform Architect **Oct 2023 – Jul 2024**

EPAM Systems, Inc. — The Procter & Gamble Company (P&G)

- Architected enterprise GCP network infrastructure—ILB, XLB, and Private Service Connect—for 30+ mission-critical applications, improving cross-region availability and reducing network latency by ~25%.
- Scaled Apigee X platform to support 120+ API proxies and products, enabling governed API consumption across P&G's global developer ecosystem and reducing API integration time by ~40%.
- Orchestrated the deployment of 500+ Cloud Run services via GitHub Actions CI/CD pipelines, achieving 99.8% deployment success rate and reducing release cycle time from weeks to hours.

Engineering Team Lead **Sep 2023 – Nov 2023**

EPAM Systems, Inc.

- Accelerated onboarding for 8 engineers, cutting time-to-productivity by ~50% through structured training programs and automated access provisioning.
- Stabilized AWS RDS production databases by resolving critical performance bottlenecks, reducing query latency by ~40% and eliminating unplanned downtime.
- Standardized automated deployments across Jenkins and GitLab CI/CD pipelines, enabling consistent, zero-downtime releases for 12+ services.

Developer Team Lead **Nov 2022 – Jun 2023**

EPAM Systems, Inc. — AutoZone, Inc.

- Spearheaded development of a GCP-native eCommerce search platform serving 50M+ product queries monthly, using Java, SpringBoot, Cloud Functions, and Dataflow to deliver sub-second search response times.
- Engineered high-performance search indexing and ranking with Apache Lucene and Apache Solr, improving product discovery relevance by ~30% and driving measurable uplift in conversion rate.
- Built scalable Dataflow pipelines processing 200GB+ of product catalog data daily, enabling real-time inventory search across 2M+ SKUs for AutoZone's digital storefront.

Lead Systems Engineer **Mar 2022 – Sep 2022**

EPAM Systems, Inc. — Equifax

- Pioneered ML model development on Vertex AI—spanning AutoML and custom training—delivering 8 production models that powered credit risk scoring for millions of Equifax consumers.
- Designed Vertex AI environment architecture with CMEK-secured standard and private endpoints, achieving enterprise-grade data security compliance for a regulated financial institution.
- Reduced model deployment cycle by ~65% by architecting automated Vertex AI pipelines, accelerating time-to-insight for data science teams.

Senior Systems Engineer **Apr 2019 – Mar 2022**

EPAM Systems, Inc. — Google Cloud Platform Support

- Delivered expert-level GCP technical support across BigQuery, Dataflow, Composer, and Dataproc for Google's strategic enterprise customers, maintaining a 97% customer satisfaction (CSAT) score.
- Mentored 8+ junior engineers in Big Data and GCP best practices, reducing team escalation rate by ~35% and building internal capability aligned to Google's support SLAs.
- Automated Terraform-based cloud deployments for 40+ enterprise customers, eliminating manual provisioning errors and reducing deployment time by ~50%.

Projects

Exam Generator — Creator & Maintainer **2024 – Present**

exam-generator.ezetina.com

- Built a full-stack AI-augmented exam platform (Astro + FastAPI + MongoDB Atlas) using prompt engineering and NotebookLM deep research to generate high-quality question banks across 10+ certification domains, directly enabling colleagues and friends to successfully pass cloud certification exams.

- Architected a high-performance Island Architecture frontend achieving >95 Lighthouse score and <1.5s FCP, backed by a FastAPI scoring engine with session management, practice mode, and performance analytics.
- Provisioned complete infrastructure via Terraform IaC with CDN integration and multi-stage Docker builds, automated through GitHub Actions CI/CD with Playwright E2E tests, Lighthouse CI, and semantic versioning with rollback capabilities.

Belarusian-Jewish Cultural Heritage Digital Museum — GCP Infrastructure Architect **2025 – Present**
belarusianjewish.com

- Architected complete GCP infrastructure-as-code using Terraform from greenfield — VPC, Compute Engine (Drupal CMS + GitLab runner), Cloud Storage, IAM, Cloud NAT, and firewall rules — delivering a production-ready environment with zero pre-existing cloud infrastructure.
- Engineered GitLab CI/CD pipelines with Workload Identity Federation for keyless authentication, incorporating automated validation, planning, and approval gates for controlled, auditable deployments.
- Implemented enterprise-grade security posture (least-privilege IAM, encrypted secrets, network isolation, audit logging) and produced full technical documentation — architecture diagrams, pipeline flows, and operational runbooks — enabling sustainable maintenance by non-cloud-specialist volunteers.

Education

Master's Degree in Big Data and Visual Analytics **2020 – 2022**
Universidad Internacional de la Rioja

Bachelor of Computer Science **2006 – 2013**
Universidad Autónoma Metropolitana

Technical Skills

AI & Generative AI: Vertex AI (AutoML, Custom Training, Pipelines, Model Registry), AWS Bedrock, AWS SageMaker, Langchain, Foundation Models, Prompt Engineering, Responsible AI, CMEK-secured Endpoints

Cloud Governance & FinOps: FinOps Framework (Linux Foundation), CloudZero, Terraform IaC, Cost Allocation & Optimization, Policy Enforcement, Multi-Cloud Compliance, HA/DR Design, Cloud Armor

DevOps & CI/CD: GitHub Actions, GitLab CI, Jenkins, Bitbucket Pipelines, Docker, Temporal, Terraform Modules, IaC at Scale

Distributed Systems & Big Data: BigQuery, BigQuery ML, Pub/Sub, Datastream, Dataflow, Apache Beam, Dataproc, Apache Airflow, Cloud Composer, Data Catalog, dbt

Cloud Platforms: Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure

API & Application Development: Apigee X, FastAPI, Flask, SpringBoot, Go (Golang)

Databases: PostgreSQL, Cloud SQL, AWS RDS

Programming: Python, Go, Java, SQL

Languages: English (Professional — B2+), Spanish (Native)

Certifications

Google Cloud: Professional Cloud Architect, Professional Data Engineer, Professional Cloud DevOps Engineer, Associate Cloud Engineer, Certified Partner Specialist — Gemini Enterprise Deployment, Generative AI Leader, Cloud Digital Leader

AWS: Certified Cloud Practitioner, Certified AI Practitioner

Microsoft: Certified: Azure Fundamentals (AZ-900)

HashiCorp: Certified: Terraform Associate

Astronomer: Certification for Apache Airflow Fundamentals

Anthropic: Claude Certified Architect – Foundations
